

# Pier Approach

Bournemouth Council undertook the phased redevelopment of the pier approach area. MSAFE worked alongside the project team acting as CDM Advisor to the Client and Principal Designer. We were able to bring our experience of working within the Bournemouth area and the RNLI on coastal sites. The project involved many challenges including:

- The need to keep the adjacent public realm areas open and operational.
- Work around a complex network of existing services.
- Design and installation of a water play feature.

MSAFE were involved throughout the design development formally supporting the client and principal designer but providing advice and support to other designers where necessary. MSAFE continued their role supporting the Client and Principal Designer by undertaking regular site monitoring visits. We also ensured that a robust Health and Safety File was developed by assisting the team compile it on our cloud and handing a digital copy to the client.
