

Royce Institute

The Henry Royce Institute brings together world-leading academics and industry partners to commercialise materials science research, in a flexible facility that enables staff to react quickly to the latest research opportunities. Careful consideration and coordination were required through the design phase to manage risks associated with cryogenic gas transportation, laboratory flue extraction and the housing of expensive equipment highly sensitive to vibration.

Located at the heart of the University of Manchester's Engineering Campus, the 16,000m² houses world-leading materials scientists, state-of-the-art equipment and collaborative space for industrial engagement. At 46m in height, the Royce Building is now prominent new feature on the Manchester skyline.

MSAFE Client NBBJ Architects then Laing O'Rourke

Location Manchester, UK

Value 100M

Size 16,000m²

Design Team NBBJ Architects, Ramboll, Arup
